PROFESSIONAL SUMMARY

Data Scientist with industry experience developing Machine Learning models, AI-powered automation workflows, and cloud-based analytics solutions. Skilled in Python, SQL, Machine Learning, Google Cloud Platform, APIs, and Business Intelligence tools, with a proven ability to deliver scalable data products that improve business decision-making and operational efficiency.

WORK EXPERIENCE

Hype Invention

Marketing Data Scientist | 2024 Sep. – Present

- Developed **Looker Studio dashboards** and KPI reporting solutions by integrating data from **Google Analytics 4, Google Ads, Meta Ads, Google Search Console, CRM systems, and third-party platforms**, providing actionable insights for clients and internal teams.
- Performed **predictive analysis**, traffic analysis, and marketing performance evaluations to support campaign optimization and data-driven business decisions.
- Designed and implemented **workflow automation solutions** using **n8n, Zapier, and Make**, reducing manual effort and improving operational efficiency across business processes.
- Developed and maintained **REST API integrations** and automated data pipelines to synchronize data across multiple platforms, supporting reporting, analytics, and workflow automation.
- Built and managed solutions using **Google Cloud Platform**, including Google Cloud APIs and cloud-based services, to support scalable integrations, data processing, and automation workflows.
- Collaborated with cross-functional teams to deliver analytics, automation, and reporting solutions tailored to client and business requirements.

TECHNICAL SKILLS

Programming: Python (NumPy, Pandas), SQL, R
Data Visualization & BI: Looker Studio, Power BI, Tableau, Excel, DAX
Machine Learning & AI: Scikit-Learn, TensorFlow, Keras, PyTorch, NLP, Transformers, OpenCV, Predictive Analytics, Classification, Regression, Model Evaluation, Feature Engineering
Automation & APIs: n8n, Zapier, Make, REST APIs, API Integrations, Workflow Automation
Cloud & Platforms: Google Cloud Platform (GCP), GA4, Google Search Console, Google Ads, Meta Ads, CRM Systems, HubSpot, Mailchimp
Soft Skills: Analytical Thinking, Problem Solving, Communication, Stakeholder Management, Team Collaboration

---

PROJECTS

AI-Powered Marketing Analytics Dashboard

- Developed an automated marketing analytics platform integrating **Google Analytics 4, Google Ads, Meta Ads, and Klaviyo** into a centralized reporting solution using **REST APIs**.
- Built automated data ingestion pipelines and AI-generated performance commentary, replacing a manual reporting process and reducing reporting effort by an estimated **25-30 hours per month**.
- Deployed the application on **Render**, implementing secure OAuth authentication and resolving data synchronization challenges across multiple platforms.

AI Meeting Task Automation

- Developed an AI-powered workflow using **n8n, OpenAI, Google Drive, Grain, and ClickUp** to automatically generate project tasks from client meeting transcripts.
- Integrated client documentation and project scope into the workflow to produce context-aware action items and streamline project management.
- Reduced manual post-meeting effort while improving the consistency and accuracy of task creation.

Sentiment Analysis with NLP

- Developed a sentiment analysis pipeline using **NLTK VADER** and a pre-trained **RoBERTa transformer model** to classify Amazon food reviews.
- Compared the performance of both approaches and demonstrated that **RoBERTa** captured contextual sentiment more effectively than the lexicon-based VADER model.
- Performed exploratory data analysis and visualized sentiment patterns using **Python, Pandas, Matplotlib, and Seaborn**.

Multiple Disease Prediction Web Application

- Developed a machine learning application to predict the risk of diabetes, cardiovascular disease, heart disease and liver disease using healthcare datasets.
- Trained and Evaluated **Logistic Regression** and **Random Forest** models to compare predictive performance and improve classification accuracy.
- Built an interactive Streamlit interface that allows users to enter health metrics and receive real-time disease risk predictions.

EDUCATION

Bachelor of Science (Hons) in Science
University of Colombo, Faculty of Science
2020 – 2024

Bachelor of Information Technology (Undergraduate)
University of Colombo School of Computing
2024 – Present

KEY CERTIFICATIONS & COURSES

- Google Data Analytics Professional Certificate
- Google AI Essentials Certificate
- Business Analytics for Decision Making Certificate
- SLIIT AI/ML Engineer – Stage 1 Course Certificate
